DIGITAL AUDIO

### Note:

- See the service manual DEH-M980/UC(CRT1450) for the CD mechanism description and circuit description.

## SPECIFICATIONS

### General

Power source ..... 14.4 V DC (10.8 — 15.6 V allowable)  
Grounding system ..... Negative type  
Max. current consumption ..... 7 A  
Dimensions (chassis) ..... 180 (W) × 50 (H) × 150 (D) mm  
(front face) ..... 188 (W) × 58 (H) × 19 (D) mm  
Weight ..... 1.5 kg

### Amplifier

Max. power output ..... 25 W × 2/15 W × 4 (EIAJ)  
Continuous power output ..... 11 W × 2  
(1% dist. at 1 kHz)  
Load impedance ..... 4Ω (4 — 8Ω allowable)  
Preout output level/  
output impedance (pre out) ..... 500 mV/1 kΩ  
Tone controls (bass) ..... ±10 dB (100 Hz)  
(treble) ..... ±10 dB (10 kHz)  
Loudness contour ..... +10 dB (100 Hz), +6.5 dB (10 kHz)  
(volume: -30 dB)

### CD player

System ..... Compact disc audio system  
Usable discs ..... Compact disc  
Signal format ..... Sampling frequency: 44.1 kHz  
Number of quantization bits: 16; linear  
Frequency characteristics ..... 5 — 20,000 Hz (±1 dB)

Signal-to-noise ratio ..... 94 dB (1 kHz) (IEC-A network)  
Dynamic range ..... 90 dB (1 kHz)  
Number of channels ..... 2 (stereo)

### FM tuner

Frequency range ..... 87.5 — 108 MHz  
Usable sensitivity ..... 11 dBf (1.0μV/75Ω, mono S/N: 30 dB)  
50 dB quieting sensitivity ..... 16 dBf (1.7μV/75Ω, mono)  
Signal-to-noise ratio ..... 70 dB (IEC-A network)  
Distortion ..... 0.3% (at 65 dBf, 1 kHz, stereo)  
Frequency response ..... 30 — 15,000 Hz (±3 dB)  
Stereo separation ..... 40 dB (at 65 dBf, 1 kHz)

### MW tuner

Frequency range ..... 531 — 1,602 kHz  
Usable sensitivity ..... 18μV (25 dB)(S/N: 20 dB)  
Selectivity ..... 51 dB (±9 kHz)

### LW tuner

Frequency range ..... 153 — 281 kHz  
Usable sensitivity ..... 30μV (30 dB)(S/N: 20 dB)  
Selectivity ..... 51 dB (±9 kHz)

### Note:

Specifications and the design are subject to possible modification without notice due to improvements.

## SAFETY INFORMATION (EW MODEL)

### 1. Safety Precautions for those who Service this Unit.

- Follow the adjustment steps (see pages 11 through 27) in the service manual when servicing this unit. When checking or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.

#### Caution:

- During repair or tests, minimum distance of 13cm from the focus lens must be kept.
  - During repair or tests, do not view laser beam for 10 seconds or longer.
2. A "CLASS 1 LASER PRODUCT" label is affixed to the bottom of the player.
3. The triangular label is attached to the mechanism unit arm unit.

### 4. Specifications of Laser Diode

Specifications of laser radiation fields to which human access is possible during service.

Wavelength = 785 nanometers  
 Radiant power = 69.7 microwatts  
 (Through a circular aperture stop  
 having a diameter of 80 millimeters)

0.55 microwatts  
 (Through a circular aperture stop  
 having a diameter of 7 millimeters)

## ATTENTION

When a repair of this equipment is over, verify the following points:

- The connector passes under the connector (PRE OUT).
- The connector passes between C557 and C967.

If the arrangement of connector wire is not made as specified, there are cases where the oscillation is made at the maximum level in bass, treble and volume.

# 1. OPERATION AND CONNECTION

## Using the Removable Front Panel Detaching the Front Panel

- The front panel cannot be removed during disc loading or ejection.

- Press button [8], and the right-hand side of the panel will eject.
- To remove the front panel, pull its right-hand side toward you. (Fig. 5)

Fig. 5

Take care not to put pressure on the display or drop the front panel.

- Enclose for safekeeping the front panel that is removed in the supplied protective case. (Fig. 6)

Fig. 6

## Precautions

- Do not touch the contacts on the front panel or on the unit body, since this may result in poor electrical contact. If dirt or other foreign substances get on the contacts, wipe them with a clean, dry cloth. (Fig. 9) (Fig. 10)

Fig. 9

Fig. 10

## Adjusting Volume and Tone

### Parts Identification (Fig. 1)

- [1] Bass / Treble
- [2] Eject
- [3] Source Selector
- [5] Disc Insertion Slot
- [6] Loudness
- [7] Display
- [12], [13] Illumination Switch
- [18] Volume / Balance
- [19] Fader

### Switching Power On Tuner

Press button [3] to switch the tuner power on. Press button [3] again to switch the power off.

### CD Player

When a disc is inserted half-way into the disc insertion slot [5] with its label side upward, the disc is automatically loaded and played. To remove the disc, push button [2].

### Changing the source

To change the source, push button [3] with the disc inserted in the slot. At each press of the button, the source changes as follows: CD player → Tuner → OFF.

## Replacing the Front Panel

With a hollow in the left-hand end of the front panel aligned to projections on the left-hand front wall of the equipment, press the panel's right-hand side against the equipment to put it into place. (Fig. 7) (Fig. 8)

Fig. 7

Fig. 8

- Do not place the panel from the right side since it will be locked. To unlock, press button [8].
- When replacing the front panel, do not put pressure on the display or control buttons.

## Precautions When Handling the Front Panel

- Do not leave the front panel in any area exposed to high temperatures or direct sunlight.
- Do not drop the front panel or otherwise subject it to strong impact.
- Do not allow such volatile agents as benzene, thinner, or insecticides to come into contact with the surface of the front panel.
- Never try to disassemble the front panel.

## Adjusting Audio

### Adjusting Volume

Turn the control [18] to the right to raise the volume. Turn the control to the left to lower the volume.

### Adjusting the Fader

Turn the control [19] upward to fade sound in the rear speakers. Turn the control downwards to fade sound in the front speakers.

- With a 2 speaker system, set the control in a central position.

### Adjusting Bass

Turn the control [1] to the right to increase bass. Turn the control to the left to decrease bass.

### Adjusting Treble

Pull the control [1] towards you until it clicks. Turn the control to the right while it is in this position to increase treble. Turn it to the left to decrease treble. After adjusting the control, push it back to its original position.

## Listening to the Radio

### 1. Turn on the tuner's power by pressing button [3].

Each time the button is pushed the main unit switches between tuner and power off modes.

- This operation will differ if there is a CD inserted in the CD player. Refer to the section on the source switch on page 3 for details.

### 2. Press Button [6] to select a band.

FM1 → FM2 → FM3 → MW/LW

Use button [4] to switch between MW (531 — 1,602 kHz) and LW (153 — 281 kHz).

**3. Use seek tuning to tune in a frequency.** Ensure that "MANU" [25] is not indicated on the display. (If so, turn it off by simultaneously pressing the (+) and the (–) sides of button [4]).

Press either the (+) side or the (–) side of button [4]. When the (+) side is pressed, the tuner will automatically receive high frequencies.

When the (–) side is pressed, it will automatically receive low frequencies.

### 4. Adjust volume and tone (see page 3).

### 5. Assign the tuned frequency to one of the Buttons in Bank [12]–[17] (preset memory).

Press and hold down one of the buttons in Bank [12]–[17] for at least 2 seconds. The frequency is assigned to the selected button when the preset number [20] stops flashing on the display. Up to 18 FM stations (6 each for FM1, FM2 and FM3), and six MW/LW stations can be assigned to the preset memory buttons in Bank [12]–[17].

## Adjusting Balance

Pull the control [18] towards you until it clicks. Turn the control to the right while it is in this position to fade sound in the left speaker. Turn it to the left to fade sound in the right speaker. After adjusting the control, push it back to its original position.

## Using the Loudness Function

Press button [6] for about 2 seconds and the "LOUD" indication will appear on the display. This loudness function lets you enhance both high and low frequencies to give a more natural sound at low volumes. To cancel this function, press button [6] again for about 2 seconds.

## Switching Illumination Colour

Pressing buttons [12] and [13] simultaneously will turn the illumination into green and red.

## Using the Radio

### Parts Identification

#### Fig. 1

- [3] Source selector
- [4] Tuning / Local seek sensitivity / Seek, Manual
- [6] Band
- [7] Display
- [9] FM stereo / Mono
- [10] Preset scan / Best stations memory (BSM)
- [11] Local station
- [12]–[17] Preset

#### Fig. 2

- [20] Preset number
- [21] FM stereo
- [22] Frequency
- [23] FM mono
- [24] Local station
- [25] Manual
- [26] Loudness
- [27] Band

### 6. Once a frequency is assigned to a Button in Bank [12]–[17], you just need to press that Button to tune it in.

This also causes the number of the button pressed to appear at Position [20] on the display.

## Adjusting Seek Sensitivity

The seek tuning function of this tuner lets you select between a local setting for reception of strong stations only, and a DX (distant) setting for reception of weaker stations. The local setting also has 4 seek tuning sensitivity levels for FM and 2 levels for MW/LW to match local conditions.

### Changing the Local Seek Sensitivity

1. Use button [6] to select a band.
2. Hold down the button [11] for more than 2 seconds, and the display will show you the current local seek sensitivity (Example: "LOC2") for about 5 seconds.
3. While the local seek sensitivity remains on the display, press the (+) side of button [4] to increase the sensitivity level, and the (–) side to decrease the level as shown below.

FM : LOC1 = LOC2 = LOC3 = LOC4

MW/LW: LOC1 = LOC2

The LOC4 setting allows reception of only the strongest stations, while lower settings let you receive progressively weaker stations.

- The display of local seek sensitivity returns to the frequency when about 5 seconds have elapsed after the change of sensitivity.

## Switching between Local and DX

Press button [11] to switch between Local and DX (distant) seek tuning.

When "LOC" [24] is shown on the display, seek tuning is performed with the local seek sensitivity. Otherwise, seek tuning is performed with the DX seek sensitivity.

## Manual Tuning

Use manual tuning when stations are too weak to be picked up by seek tuning.

1. Turn on "MANU" [25] by simultaneously pressing the (+) side and the (–) side of button [4].
2. Each press of the (+) side of button [4] increases the frequency in 50 kHz steps in the FM band, 9 kHz in the MW band and 1 kHz in the LW band. Pressing the (–) side of button [4] decreases the frequency. Holding down either side of button [4] changes the frequency at high speed.

## Switching between FM Stereo and Mono

Generally, it is best to allow the ARC (Automatic Reception Control) function to automatically set the optimum listening conditions.  [21] turns on during stereo broadcast is in reception. When there is a large amount of noise, you can press button [9] for clearer mono reception ("MONO" [23] will appear on the display).

## BSM (Best Stations Memory)

This function automatically locates stronger stations and automatically assigns their frequencies to the buttons in Bank [12]~[17], from strongest to weakest. It comes in handy when trying to find local stations while driving.

1. Press button [6] and select a band.
2. Hold down button [10]. After about 2 seconds, BSM search will start. At this time, "----" will flash on the display.
3. The frequency display will return once BSM search is complete, and frequencies are assigned to buttons 1 through 6 in Bank [12]~[17].
- At the end of the BSM search, the displayed frequency is that assigned to button [ ] of Bank [12]~[17].
- You can cancel BSM search by pressing button [10] again.
- If there are fewer than 6 strong stations in the area, some of the buttons in Bank [12]~[17] will not be assigned frequencies, so they will retain any frequencies assigned to them previously.
- BSM search may take as long as 30 seconds in areas where there are few strong stations.

## Preset Scan Tuning

This function lets you automatically monitor the stations assigned to the preset buttons.

1. Press the button [10] and the preset number [20] flash. Each station assigned to the buttons in Bank [12]~[17] will be automatically tuned in for about 8 seconds.
2. When you hear a station that you like, press button [10] again to cancel preset scan tuning and remain at that station.

- Do not use record sprays or antistatic agents. Such volatile chemicals as benzene and thinner can also damage the surface of the disc and should not be used.
- As with traditional audio records, compact discs are made of plastic. To avoid warping, keep the discs in their cases and do not store them in places exposed to direct sunlight.

## Listening to the Compact Disc

1. On inserting the CD, with the label side up, half way into the CD slot [5], it will automatically be set into position and start to play.

The track number [28] indicator will light.

2. Adjust volume and tone (see page 3).

3. To stop CD playback, press button [3] turning the power off.

Pressing the button will change the source as follows: CD Player → Tuner → OFF. Press button [3] again to restart playback. It will play from close to where it was previously stopped.

4. To remove or change discs, press button [2].

When the disc is ejected, pressing it will cause it to be set into position again, and playback to start.

### Note:

- In order to protect the disc, eject it after it has stopped rotating. The timing of ejection may differ according to the disc.
- If a disc can only be inserted halfway, or if the disc does not play after being loaded, something may be wrong with the disc. Eject the disc by pressing button [2], and check it. If it is all right, insert it again.

## Playing Compact Discs

### Parts Identification

#### Fig. 1

- [2] Eject
- [3] Source selector
- [4] Track number search / Fast forward, Reverse
- [5] Disc insertion slot
- [7] Display
- [14] Random play
- [15] Music repeat
- [16] Highlight scan
- [17] Pause

#### Fig. 3

- [26] Loudness
- [28] Track number
- [29] Manual

### Discs

- Only use compact discs (optical digital audio discs) bearing the mark shown below. (Fig. 11)

- Be sure never to touch the signal surface when handling discs. Pick up discs by grasping the outer edges or the edge of the hole and the outer edge. (Fig. 12) (Fig. 13)

Fig. 12

Fig. 13

- Do not affix paper or tape, and avoid scratching the side of the disc which contains the label (contents of disc).
- The disc revolves at high speed within the player unit, so defective (cracked or badly bent) discs should not be used.
- Dust and/or finger smudges will have no direct effect on the signal recorded on the disc, but dirt can decrease the amount of light reflected from the recorded surface, thus affecting sound quality. If the disc should become soiled, gently wipe the surface with a soft lint-free cloth, wiping from the center of the disc to the edge. (Fig. 14)

Fig. 11

Fig. 14

- Insert the disc with its label (printed) side facing up. If the disc is inserted with the label side facing down, it will not play, and the recorded side may be damaged.
- Do not insert 2 discs into the slot at the same time. This may cause a malfunction.
- Do not leave an ejected disc in the insertion slot for extended periods since direct sunlight can cause warping. Always return discs to their cases and store in areas not exposed to direct sunlight. (Fig. 15)

Discs should not be left like this for extended periods. Fig. 15

- Do not leave an ejected 8-cm CD in the slot while driving. The vibration may make it drop out.
- When driving on an uneven road, the player may not reproduce every sound property.

### Condensation

- During winter the inside of the vehicle may be very cold. If the heater is turned on and the player is used soon after, the disc or optical parts (prism, lens, etc.) may become misted up. If the disc is misted up, wipe it with a soft cloth. If the optical parts are misted up, wait for about an hour for them to warm up. They will return to their normal condition.

## Track Number Search

The desired track on the disc currently being played can be selected by track (or song) number.

1. Ensure that "MANU" [29] is not indicated on the display. If so, turn it off by simultaneously pressing the (+) side and the (-) side of button [4].
2. Use the button [4] to select a track. Pressing the (+) side increases the track number [28], and pressing the (-) side decreases it. Holding the button down continuously increases or decreases the track number.

## Using Fast Forward and Reverse

1. Press simultaneously both (+) and (-) sides of the button [4] "MANU" [29] will appear on the display. At this time, the display will show the amount of elapsed disc play time (Example: "01'05").
  2. Press the (+) side of button [4] for fast forward, and the (-) side for reverse.
- Sound is output during fast forward and reverse operations.
  - When a disc in which there are several seconds between tracks is used, the amount of elapsed disc-play time is shown, for example, as "-02'", "-01'" and "-00'".

## Pausing

1. Press button [17] to pause during disc playback (Track number [28] will change to "----").
  2. Press button [17] again to release pause.
    - It is possible to select music even during pause by using the track number search ("----" [28] will change to Track number, while the music is being selected).
- When the selection is completed, the playback will be paused at the beginning of the music.

## Using Highlight Scan

Highlight Scan is designed to enable you to conveniently scan all pieces of music contained in the disc by playing 10 seconds each at your designated point of time after the start of the music. The starting time of play is set at one minute in factory. Therefore, the Highlight Scan begins one minute after the start unless you designate it otherwise.

When you do not want to change the factory-set time:

1. Pressing button [16] ("SC" will appear on the display).
  2. The contained pieces of music will be played in sequence for 10 seconds each one minute after the beginning.
  3. Press button [16] again when your selected piece comes, and it will continue to play. At this point, the Highlight Scan discontinues to operate.
- The previous function automatically resumes when a piece of music with which Highlight Scan began returns.

## Error Mode

Should an abnormality occur — for example, the built-in CD Player cannot be operated, or the music stops during CD playback — the display of this unit will indicate an error mode. (Example: "E-10")

While it the unit is in error mode, a number will be displayed indicating the cause of the error, so please check the items listed below. If you cannot fix the problem after checking the cause of the error, please contact your dealer or your nearest Pioneer service center.

## HEAT indicator

To prevent deterioration in the semi-conductor laser from overheating, playback of a CD will stop when the temperature surrounding of this unit rise during play. When this occurs, "HHHH" will be indicated on the display. Please wait until the temperature drops.

## Using the Clock Display

### Parts Identification (Fig. 1)

- [3] Clock
- [7] Display
- [16] Minute Adjustment
- [17] Hour Adjustment

### Displaying the Time

The clock is displayed when button [3] is

## Changing the Starting Time of Highlight Scan

When you want to set the starting time of the Highlight Scan to 30 seconds:

1. Indicate "MANU" [29] on the display by simultaneously pressing the (+) side and the (-) side of button [4].
  2. Keep pressing either (+) or (-) side of button [4] until the numerals reaches 30.
  3. Press button [16] for 2 or more seconds ("SC" will appear on the display). Highlight Scan will begin 30 seconds after the start of the next piece of music.
- The starting time of Highlight Scan can be designated at ten or tens of seconds only. A tenth or tenths of seconds can be disregarded.
  - If a piece of music ends before your designated point of time at which Highlight Scan starts, the scanning is performed for its beginning 10 seconds.
  - If a piece of music lasts less than 10 seconds, so does the Highlight Scan.
  - You may wish to change the starting time longer without suspending the function. You may do so, however, only to a relatively long-playing piece of music because, as a matter of course, the time cannot be set so as to come after the end of the music.

## Using Music Repeat and Random Play

### Music Repeat

1. To repeat the music you are listening to, press button [15] ("RP" will appear on the display).
  2. To cancel music repeat, press button [15] to turn off "RP".
- When music repeat is not operational, the whole disc will be played repeatedly.

### Random Play

1. To play music randomly, press button [14] ("Rd" will appear on the display). Once the current track has been played, the microprocessor will randomly select the next and subsequent tracks.
  2. To cancel random play, press button [14] to turn off "Rd".
- Since selections are played in random order, the same selection may be played twice in succession.

Display	Cause	Treatment
11, 12	Dirt or a scratch on the disc stops the laser beam from being able to focus.	Wipe the dirt off the disc. Exchange the disc if it is scratched.
14	An unrecorded compact disc (CD-R), can be recorded on once is being used.	When you use a CD-R, load one that has been recorded on.
30	Dirt or a scratch on the disc hinders the track number search function.	Wipe the dirt off the disc. Exchange the disc if it is scratched.
10, 12, A0	Electrical or mechanical system fault.	Turn the car ignition switch OFF, then ON again, or change to other sources except CD playback, and then to CD playback again. If the error indication does not disappear, contact your dealer or your nearest Pioneer service station.

pressed (for more than 2 seconds).

Following the same procedure will turn off clock display.

- The clock display can be used only when the main unit is in operation.
- When the clock display is ON, pressing other buttons will release the clock display. The display will be restored approximately 25 seconds after the button operation has been completed.

### Adjusting the Time

#### Adjusting the Hours

Press button [3] till the clock is displayed

(for more than 2 seconds). While pressing button [3], press button [17] simultaneously to adjust the hour setting of the clock. Each press of button [17] advances the hour setting by one hour, and holding it down advances the setting at high speed.

#### Adjusting the Minutes

Press button [3] till the clock is displayed (for more than 2 seconds). While pressing button [3], press button [16] simultaneously to adjust the minute setting of the clock. Each press of button [16] advances the minute setting by one minute, and holding it down advances the setting at high speed.

## Connecting the Units

### Note:

- This unit is for vehicles with a 12-volt battery and negative grounding. Before installing it in a recreational vehicle, truck, or bus, check the battery voltage.
- To avoid shorts in the electrical system, be sure to disconnect the battery cable before beginning installation.
- Refer to the owner's manual for details on connecting the various cords of the power amp and other units, then make connections correctly.
- Secure the wiring with cable clamps or adhesive tape. To protect the wiring, wrap adhesive tape around them where they lie against metal parts.
- Route and secure all wiring so it cannot touch any moving parts, such as the gear shift, handbrake, and seat rails. Do not route wiring in places that get hot, such as near the heater outlet. If the insulation of the wiring melts or gets torn, there is a danger of the wiring short-circuiting to the vehicle body.
- Do not shorten any leads. If you do, the protection circuit may fail to work when it should.
- Never feed power to other equipment by cutting the insulation of the power supply lead of the unit and tapping into the lead. The current capacity of the lead will be exceeded, causing over heating.
- Don't pass the orange lead through a hole into the engine compartment to connect to the battery. This will damage the lead insulation and cause a very dangerous short.

- Replace fuses only with the types stipulated on the fuse holder.
- Since a unique BPTL circuit is employed, never wire so the speaker leads are directly grounded or the left and right speaker leads are common.
- Speakers connected to this unit must be high-power types possessing minimum rating of 25 W and impedance of 4 to 8 ohms. Connecting speakers with output and/or impedance values other than those noted here can damage the speakers.

## 2. DISASSEMBLY

### ●Case

1. Remove the two screws.
2. Insert and turn a flat screwdriver at locations indicated by arrows to remove the case.

### ●Detach Grille Assy

1. Press the detach button, and then pull detach grille assy.

Fig.16

### ●Panel Assy

1. Remove the three knobs.
2. Remove the screw A.
3. Disconnect the three stoppers indicated by arrow.
4. Disconnect the connector(A).
5. Remove the panel assy.

### ●CD Mechanism Module

1. Remove the four screws B.
2. Disconnect the connector(B).
3. Remove the CD mechanism module.

Fig.17

### ●Chassis Unit

1. Remove the two screws C and the three screws D, and then remove the heat sink.
2. Remove the two screws E, and then remove the holder.
3. Stretch the four claws.
4. Remove the chassis unit.

Fig.18

3. BLOCK DIAGRAM

DEH-670SDK/GR

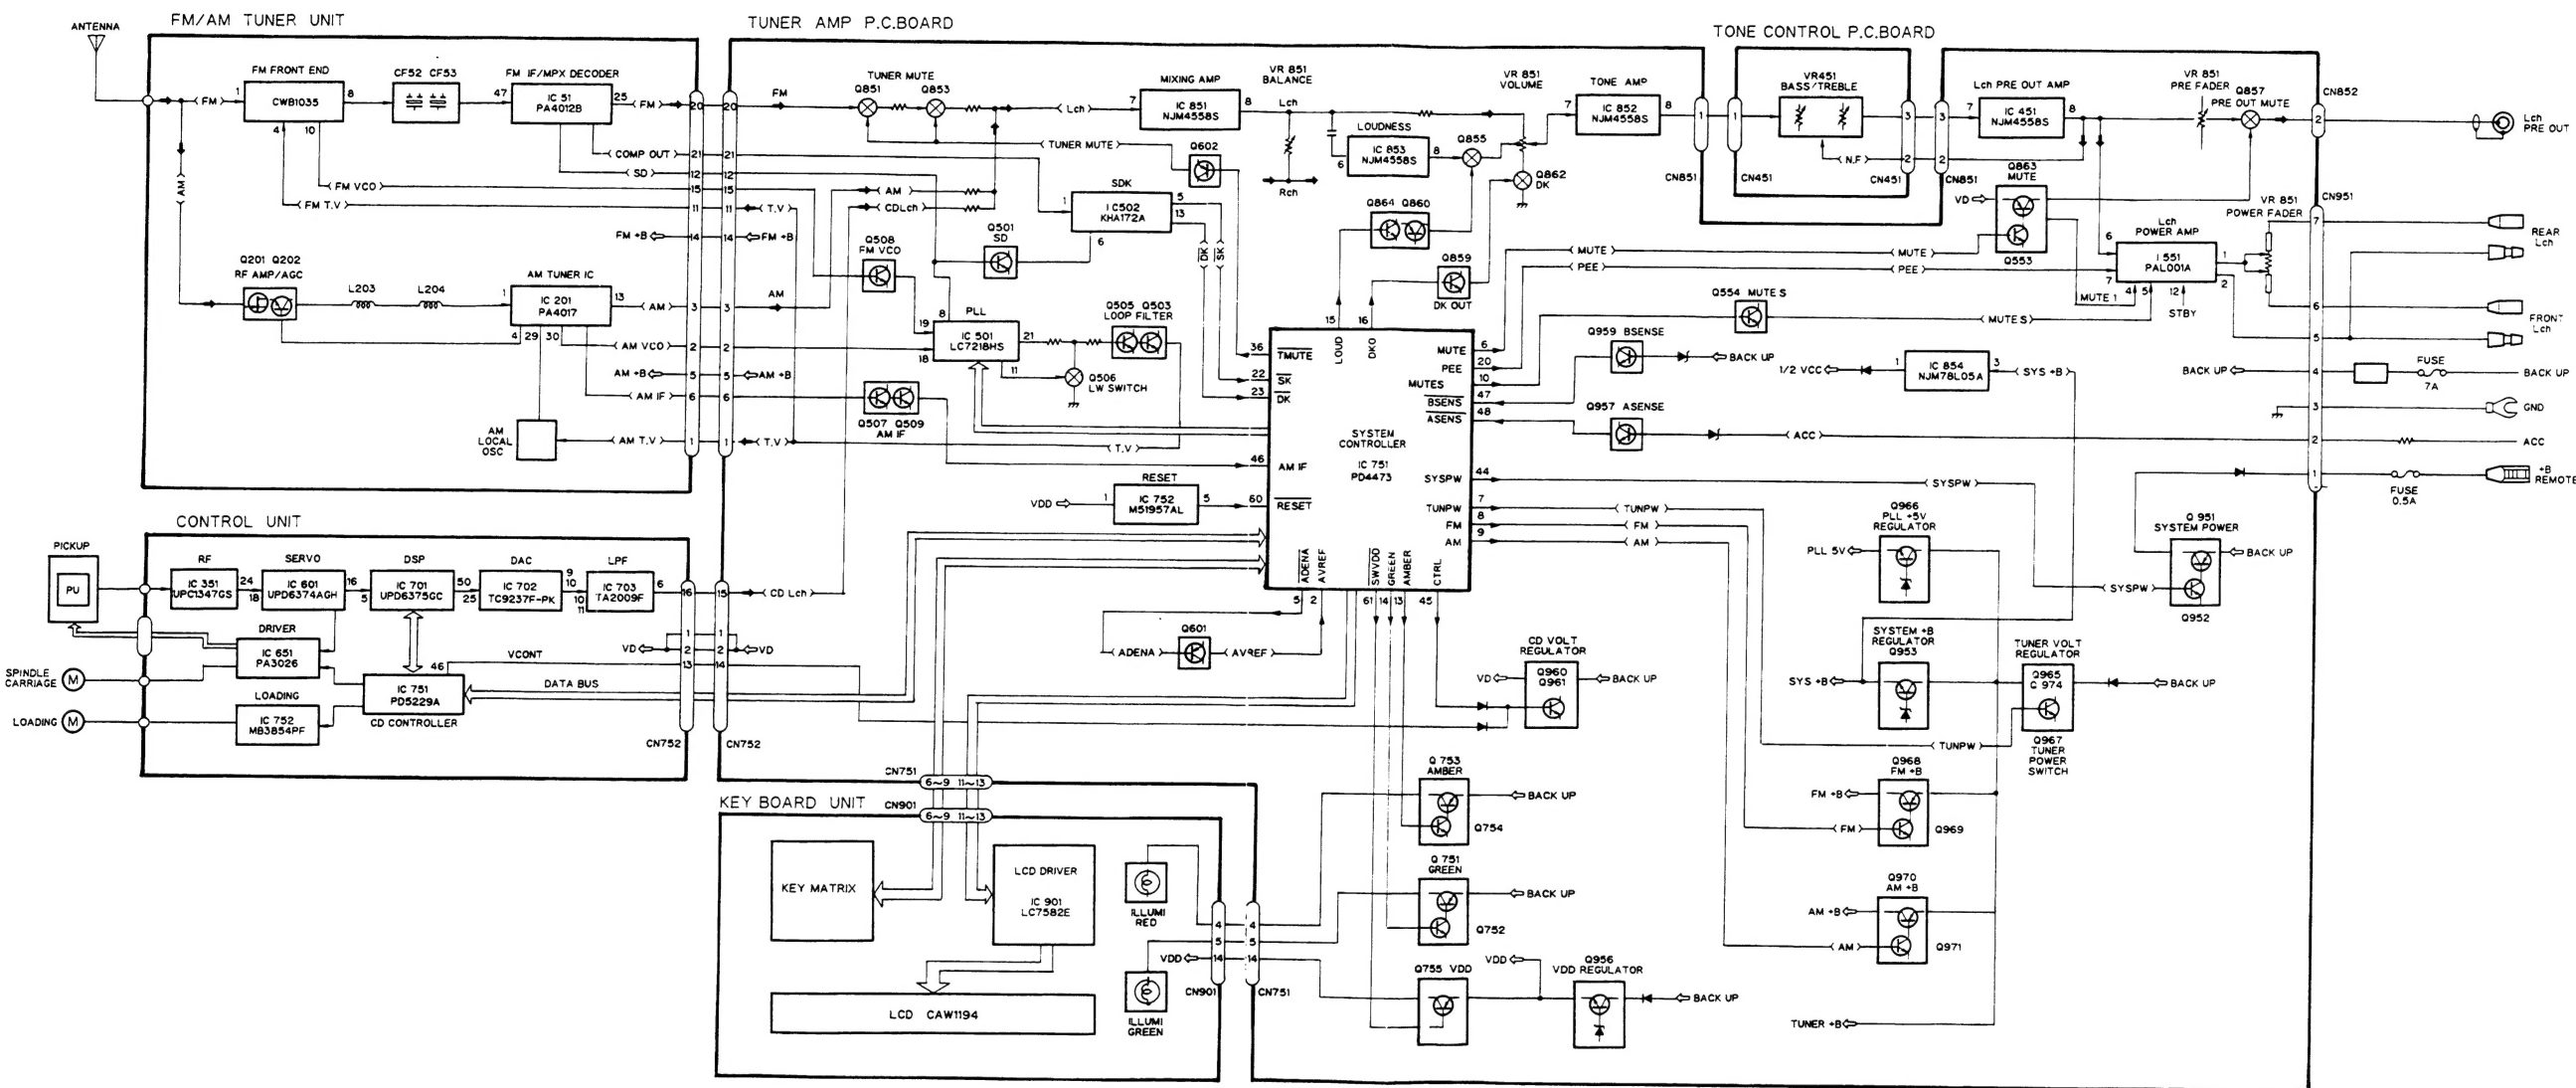

Fig. 19

## 4. ADJUSTMENT

### 4.1CD ADJUSTMENT

#### 1)Precautions

- This unit uses a single power supply (+5V) for the regulator. The signal reference potential, therefore, is connected to REFOUT (approx. 2.5V) instead of GND.

If REFOUT and GND are connected to each other by mistake during adjustments, not only will it be impossible to measure the potential correctly, but the servo will malfunction and a severe shock will be applied to the pick-up. To avoid this, take special note of the following.

Do not connect the negative probe of the measuring equipment to REFOUT and GND together. It is especially important not to connect the channel 1 negative probe of the oscilloscope to REFOUT with the channel 2 negative probe connected to GND.

And since the frame of the measuring instrument is usually at the same potential as the negative probe, change the frame of the measuring instrument to floating status.

If by accident REFOUT comes in contact with GND, immediately switch the regulator or power OFF.

- Always make sure the regulator is OFF when connecting and disconnecting the various filters and wiring required for measurements.
- Before proceeding to further adjustments and measurements after switching regulator ON, let the player run for about one minute to allow the circuits to stabilize.
- Since the protective systems in the unit's software are rendered inoperative in test mode, be very careful to avoid mechanical and/or electrical shocks to the system when making adjustment.
- Test mode starting procedure  
Switch ACC, back-up ON while pressing the 4 and

6 keys together.

- Test mode cancellation  
Switch ACC, back-up OFF.
- Disc detection during loading and eject operations is performed by means of a photo transistor in this unit. Consequently, if the inside of the unit is exposed to a strong light source when the outer casing is removed for repairs or adjustment, the following malfunctions may occur.  
\*During PLAY, even if the eject button is pressed, the disc will not be ejected and the unit will remain in the PLAY mode.  
\*The unit will not load a disc.  
When the unit malfunctions this way, either reposition the light source, move the unit or cover the photo transistor.
- When loading and unloading discs during adjustment procedures, always wait for the disc to be properly clamped or ejected before pressing the another key. Otherwise, there is risk of the actuator being destroyed.
- Turn power off when pressing the button TRACK+ or the button TRACK- key for focus search in the test mode. (Or else lens may stick and the actuator may be damaged.)

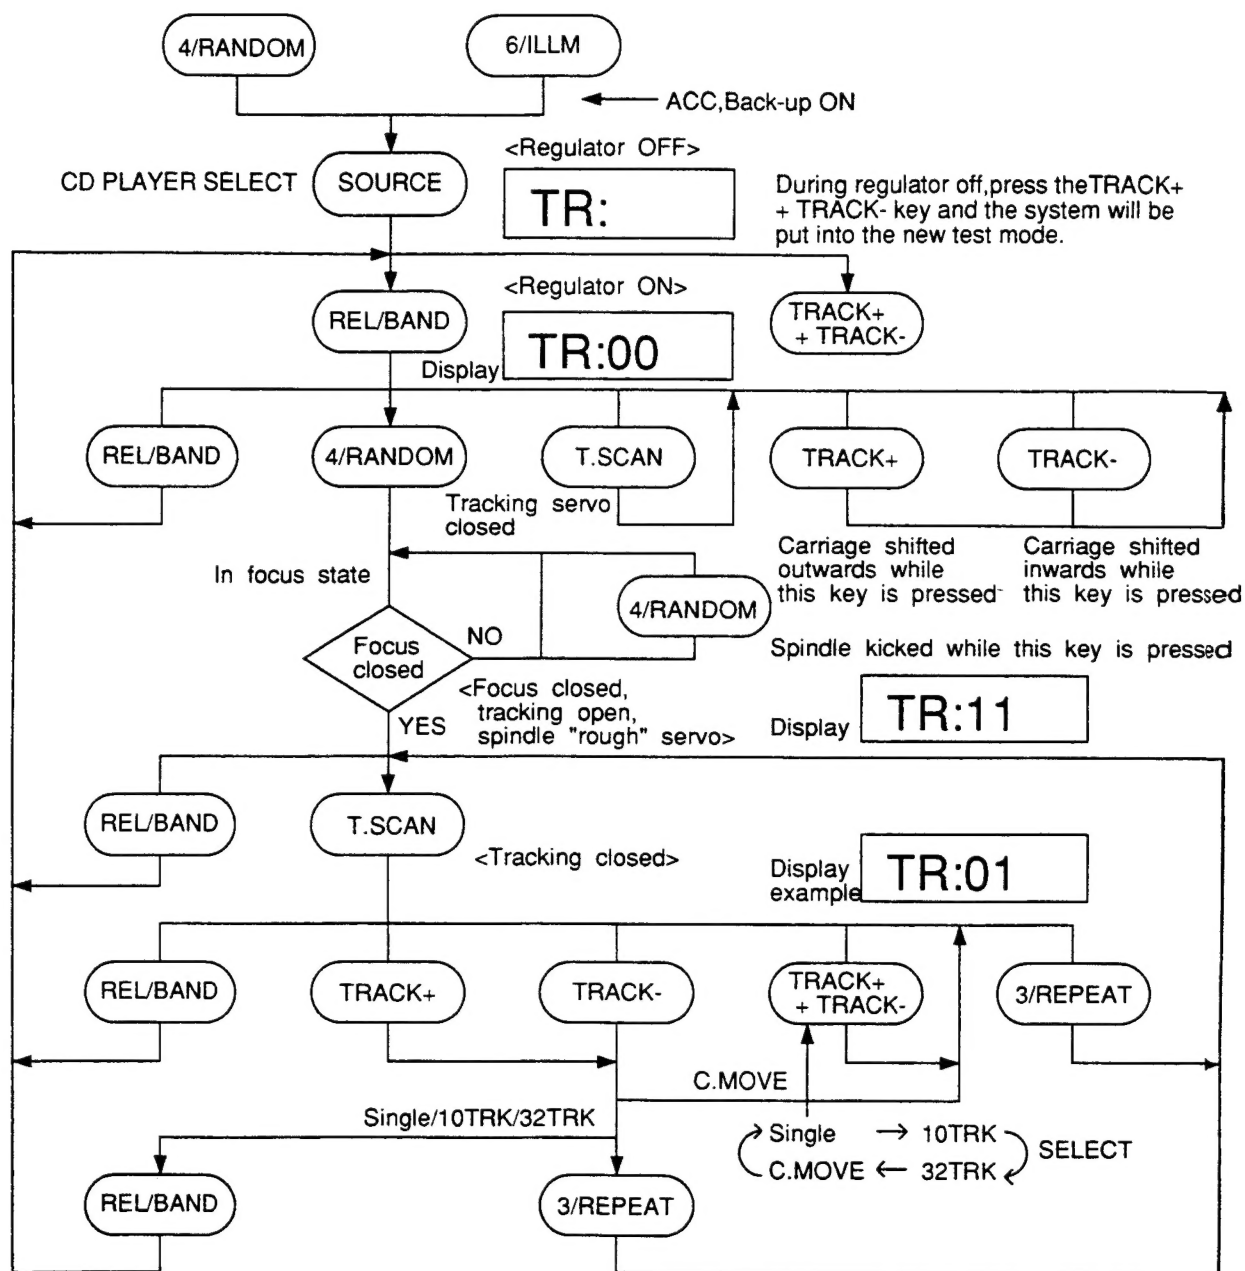

Key	Function
REL/BAND	Regulator ON/OFF
TRACK+	FWD Kick
TRACK-	REV Kick
EJECT	EJECT
TRACK+ + TRACK-	Jump mode

Key	Function
T.SCAN	Tracking close
3/REPEAT	Tracking open
4/RANDOM	Focus close
SOURCE	CD ON/OFF

- SINGLE/10TRK/32TRK will continue to operate even after the key is released. Tracking closed the moment C-MOVE is released.
- JUMP MODE resets to SINGLE as soon as power is off.

●Flow Chart

### ●New Test Mode (aging operation and setup analysis)

The CD ,either single or multiple, plays in the normal mode. After being set up, it will display FOK (focus), LOCK (spindle), subcode, sound skip, protection against a mechanical error or the like, occurrence of an error, cause and time of an expiry, if any, (and disc number in the multi-mode).

During the setup, the CD software operation status (internal RAM and C-point) is displayed.

The software on the head unit side dose not involve any special problem but runs normally.

#### (1) How to Put in the NEW TEST Mode

See the test mode flow chart page 12.

#### (2) Relations of keys between TEST and NEW TEST Modes.

P-BUS Commands	Keys	Test Mode Regulator OFF	Regulator ON	New Test Mode Play in progress	New Test Mode Error Protection } Talking place
B0	REL/ BAND	Regulator ON	Regulator OFF	REL/BAND	Time of occurrence Cause of error } Selected
B1	TRACK+	—	FWD-KICK	TRACK+	—
B2	TRACK-	—	REV-KICK	TRACK-	—
B3	T.SCAN	—	TRACKING CLOSE	T.SCAN	—
B4	3/REPEAT	—	TRACKING OPEN	3/REPEAT	—
B5	4/RANDOM	—	FOCUS CLOSE	4/RANDOM	—
B6	—	—	FOCUS OPEN	—	—
B7	—	—	Jump-OFF	—	—
B8	TRACK+ TRACK-	To new Test Mode	Jump-Mode selected	FF REV	Occurrence T.No Time of occurrence } Selected

Operations, such as EJECT, CD ON/OFF, etc. are to be performed normally

#### (3)Error Cause (Error Number) Code

Error Code	Classification	Mode	Description	Cause/Detail
40	ELECTRIC	PLAY	FOK=L100ms	Put out of focus
41	ELECTRIC	PLAY	LOCK=L100ms	Spindle unlocked
42	ELECTRIC	PLAY	Subcode unacceptable 500ms	Subcode fails to read
43	ELECTRIC	PLAY	Sound skipped	Last address memory operated

\*The error code is identical with those in the normal mode.

(4) Indicating an Operation Status During Setup

Status No.	Description	Protection operation
01	Carriage home mode started	None
02	Carriage moving on the internal circumference	10-second time out
03	Carriage moving on the external circumference	10-second time out
11	Setup started	None
12	Spindle turn/Focus search started	None
13	Waiting for focus closing	Failure to focus closing
14	Spindle kicked and focus checked	Out of focus
15	Tracking closed and focus checked	Out of focus
17	Carriage closed and focus checked	Out of focus
18	Lock subcode } Waiting	Failure to lock, Subcode failed to read out of focus
19	End	None

(5) Example of 7-segment Display.

(a) SET UP in progress

TRACK MIN SEC

11 11 11

While in the TEST MODE, a status number is indicated in TNO, MIN and SEC.

TRACK

11

MIN SEC

11 11

(b) Operation (PLAY, SEARCH, etc.) in progress perfectly identical with that in the multi mode.

(c) Protection/Error upon occurrence

ERROR-XX While in the error mode, an error number is displayed in MIN and SEC.

Select the display with the REL/BAND key.

TRACK MIN SEC

10 40 05

While in the PLAY MODE, an absolute time is indicated in TNO, MIN and SEC.

TRACK

10

MIN SEC

40 05

**●Measuring Equipment and Jigs**

Adjustment	Measuring equipment&jigs
Grating Adjustment	Oscilloscope,clock driver,grating adjustment filter (bandpass filter) (GGF-133),AC millivoltmeter TCD-782 (or SONY TYPE4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
Tangential Skew Check	Oscilloscope,screwdriver TCD-782 (or SONY TYPE 4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
Grating Adjustment	Oscilloscope,clock driver,two low-pass filters TCD-782 (or SONY TYPE 4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
FE Bias Adjustment	Oscilloscope TCD-782 (or SONY TYPE 4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
RF Offset Adjustment	Oscilloscope TCD-782 (or SONY TYPE 4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
TE Offset Adjustment-1	DC voltmeter Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
Tracking Balance Adjustment-1	Oscilloscope TCD-782 (or SONY TYPE 4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
Focus Servo Loop Gain Adjustment	Oscillator,gain adjustment filter (GGF-065), dual meter milli-voltmeter TCD-782 (or SONY TYPE 4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
Tracking Servo Loop Gain Adjustment	Oscillator,gain adjustment filter (GGF-065), dual meter milli-voltmeter TCD-782 (or SONY TYPE 4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
TE Offset Adjustment-2	DC voltmeter Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070
Tracking Balance Adjustment-2	Oscilloscope TCD-782 (or SONY TYPE 4) Extension Cable:GGF1132,GGF1135,GGF1128,GGF1126,GGF-070

●Adjustment Point

**Note:**

CD mechanism module can be adjusted without removing control unit.

fig. 20

● Test Point

Fig. 21

## 1 Grating Adjustment (Rough adjustment)

### • Purpose:

The grating may need adjustment in a replaced pick-up unit.

### • Maladjustment symptoms:

No disc playback; track jumping.

### • Measuring equipment / jigs

• Oscilloscope, clock driver, grating adjustment filter (bandpass filter) (GGF-133), AC millivoltmeter.

### • Measuring point

• TEY

### • Test disc and setting

• TCD-782 (or SONY TYPE 4)

• Test mode.

### • Adjustment position

• Pick-up grating adjustment hole.

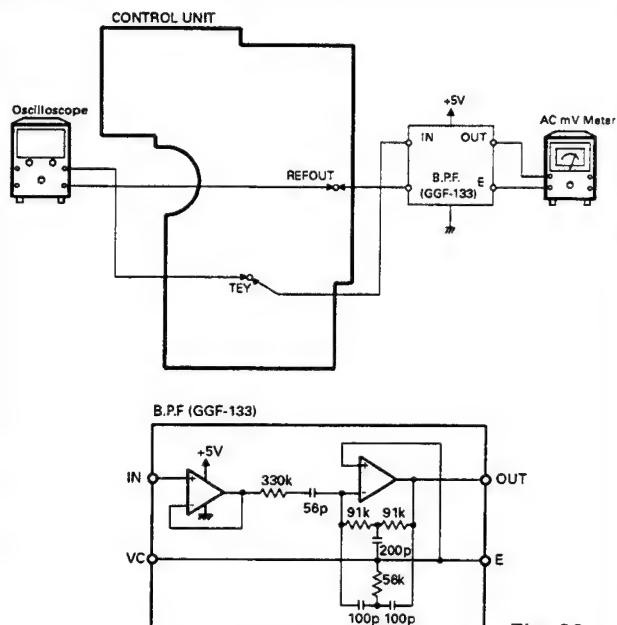

Fig. 22

### Adjustment Procedure

1. Switch regulator ON in test mode, and load a disc.
2. Use **TRACK+** or **TRACK-** key as required to bring pick-up at the adjusting hole on control unit (Tune TNO 19). (TYPE 4: TNO 14)
3. Match with TNO 29 (TYPE 4: TNO 14) when releveling the control unit.
4. Press the **4/RANDOM** key to close focus.
5. While monitoring the TEY filter output by AC millivoltmeter, turn the grating adjustment hole slowly. The AC voltage increases and decreases while turning the screw. Search for the minimum voltage level. (This corresponds to the position where the grating is on a track, and is referred to as the null point.)
6. Then while monitoring TEY by oscilloscope, turn the driver slowly clockwise from the null point (as seen from under the pick-up) until the first waveform peak amplitude is reached.

## 2 Tangential Skew Check

### • Purpose:

To check whether tangential skew has been misaligned or not when replacing the pick-up unit.

### • Maladjustment symptoms:

No disc playback; track jumping.

### • Measuring equipment / jigs

• Oscilloscope, screwdriver

### • Measuring point

• RFO

### • Test disc and setting

• TCD-782 (or SONY TYPE 4)

• Normal mode

### • Adjustment position

• Pick-up tangential adjustment screw

Fig. 23

### Adjustment Procedure

1. Check that the pick-up position does not differ from that at the same time of grating adjustment. (TCD-782: TNO 19, TYPE 4: TNO 14)
2. Turn the tangential adjustment screw to obtain a good RF waveform eye pattern. Turn the adjustment screw both clockwise and counterclockwise to points where the eye pattern deteriorates, and take the midway point as the adjustment point. As a general guide, look for an overall clear waveform, and one of the diamond shapes in the eye pattern. The diamond shapes should appear in fine lines at the point of optimum adjustment. Take care not to knock the pick-up with the screwdriver at this stage. (This kind of accident can result in loss of focus.) (See Fig. 24, 25)
3. Apply "screw-lock" to the tangential adjustment screw.
4. After adjusting tangential skew, also adjust the grating.

NG

Fig. 24

OK

AC Mode  
0.5V/div.  
0.1μs/div.

Fig. 25

### 3 Grating Adjustment(Fine adjustment)

- **Purpose:**  
The grating may need adjustment in a replaced pick-up unit.
- **Maladjustment symptoms:**  
No disc playback; track jumping.
- **Measuring equipment / jigs**
- **Measuring point**
- **Test disc and setting**
- **Adjustment position**
- Oscilloscope, clock driver, two low-pass filters
- TEY, ELPF output, FLPF output
- TCD-782 (or SONY TYPE 4)
- Test mode
- Pick-up grating adjustment hole

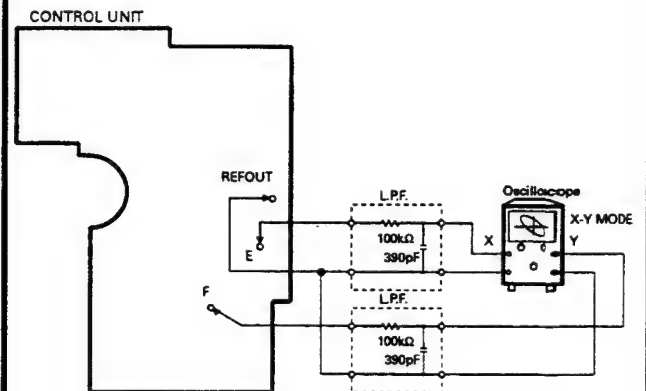

Fig. 26

#### Adjustment Procedure

1. Switch regulator ON in test mode, and load 1 disc.
2. Use **TRACK+** or **TRACK-** key as required to bring pick-up at the adjusting hole on control unit (Tune TNO 19). (TYPE 4: TNO 14)  
Match with TNO 19 (TYPE 4: TNO 14) when reinserting the control unit.
3. Press the **4/RANDOM** key to close focus.
4. With the E low-pass filter output connected to the X axis of the oscilloscope, and the F low-pass filter output connected to the Y axis, apply an input in AC mode and observe the Lissajous figure. (Fig. 27-32)
5. Using the driver, adjust the Lissajous figure to a single line (or as close as possible).
6. Switch regulator OFF and remove the filters.

TEY waveform 5ms/div, 0.5V/div.

Null Point

Lissajous figure (AC input)  
Horizontal axis E 20mV/div.  
Vertical axis F 20mV/div.

Fig. 27

"Rough" adjustment

Fig. 29

Fig. 30

Final adjustment

Fig. 31

Fig. 32

#### 4 FE Bias Adjustment

- **Purpose:**  
To adjust the focus servo bias to an optimum value.
- **Maladjustment symptoms:**  
Focus closing difficulty, poor playability.

- |                                     |                            |
|-------------------------------------|----------------------------|
| • <b>Measuring equipment / jigs</b> | • Oscilloscope             |
| • <b>Measuring point</b>            | • RFO                      |
| • <b>Test disc and setting</b>      | • TCD-782 (or SONY TYPE 4) |
|                                     | • Normal mode              |
| • <b>Adjustment position</b>        | • VR355(FEB)               |

Fig. 33

#### Adjustment Procedure

1. Play in normal mode.
2. Observe RFO in respect to REFOUT in the oscilloscope, and adjust VR355(FEB) to obtain maximum RF and eye pattern. (See Fig. 34, 35)

OK

Fig. 34

AC Mode

Before adjustment

Fig. 35

## 5 RF Offset Adjustment

- **Purpose:**  
To adjust the RF amplifier offset to a suitable value.
- **Maladjustment symptoms:**  
Focus closure fails readily.

- **Measuring equipment / jigs**
- **Measuring point**
- **Test disc and setting**
- **Adjustment position**

- Oscilloscope
- RFO
- TCD-782 (or SONY TYPE 4)
- Normal mode
- VR352(RFO)

Fig. 36

### Adjustment Procedure

1. Play tune TNO 19 in normal mode.(TYPE 4:TNO 14)
2. Use VR352 to adjust the RFO waveform so that REFOUT appears at the center.(A-B must not exceed 100 mV.)

## 6 TE Offset Adjustment-1

- **Purpose:**  
To adjust the electrical offset of the tracking servo to zero
- **Maladjustment symptoms:**  
Search times too long, carriage run-away.

- **Measuring equipment / jigs**
- **Measuring point**
- **Test disc and setting**
- **Adjustment position**

- DC voltmeter
- TEY
- No Disc
- Test mode
- VR353(TEO)

Fig. 37

### Adjustment Procedure

1. Connect LAON to GND.
2. Switch regulator ON while in test mode.
3. Using VR353(TEO), adjust the TEY output DC voltage in reference to REFOUT to a value of  $0 \pm 25 \text{ mV}$ .
4. Switch regulator OFF.

## 7 Tracking Balance Adjustment-1

- **Purpose:**  
To adjust the tracking servo offset to zero.
- **Maladjustment symptoms:**  
Search times too long, poor playability, carriage run-away.

- |                                     |                               |
|-------------------------------------|-------------------------------|
| • <b>Measuring equipment / jigs</b> | • Oscilloscope                |
| • <b>Measuring point</b>            | • TEY (Tracking error signal) |
| • <b>Test disc and setting</b>      | • TCD-782 (or SONY TYPE 4)    |
|                                     | • Test mode                   |
| • <b>Adjustment position</b>        | • VR351 (T.BAL)               |

Fig. 38

### Adjustment Procedure

1. Set the test disc (TCD-782). Switch regulator ON.
2. Using the **TRACK+** or **TRACK-** key, move the pick-up to about the center of the signal surface.
3. Press the **4/RANDOM** key to close focus.
4. Using an oscilloscope, observe the TEY signal in respect to REFOUT.  
Then adjust VR351 (T.BAL) to set the positive and negative amplitudes to the same levels. (See Fig. 39-41)
5. Switch the power OFF.

## 8 Focus Servo Loop Gain Adjustment

- **Purpose:**  
To adjust the focus servo loop gain to an optimum value.
- **Maladjustment symptoms:**  
Poor playability, reduced resistance to vibration, focus closure fails readily.
- **Measuring equipment / jigs**
  - Oscillator, gain adjustment filter (GGF-065), dual meter milli-voltmeter
- **Measuring point**
  - FEX, FEY
- **Test disc and setting**
  - TCD-782 (or SONY TYPE 4)
  - Normal mode
- **Adjustment position**
  - VR356(FG)

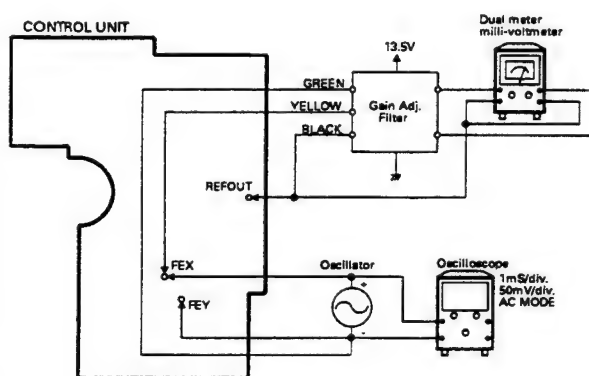

Fig. 42

### Adjustment Procedure

1. After checking that the power is OFF, connect the gain adjustment filter and measuring equipment as shown in the above diagram.
2. Play tune TNO 19 in normal mode.(TYPE 4:TNO 14)
3. Set the oscillator to 1kHz, and observe the FEX/FEY output in the oscilloscope. Adjust the oscillator output to obtain a FEX/FEY output of 100mVp-p.
4. Adjust VR356(FG) to obtain a milli-voltmeter difference of  $0 \pm 0.5\text{dB}$ .

## 9 Tracking Servo Loop Gain Adjustment

- **Purpose:**  
To adjust the tracking servo loop gain to an optimum value.
- **Maladjustment symptoms:**  
Poor playability, reduced resistance to vibration.
- **Measuring equipment / jigs**
  - Oscillator, gain adjustment filter (GGF-065), dual meter milli-voltmeter.
- **Measuring point**
  - TEX, TEY
- **Test disc and setting**
  - TCD-782 (or SONY TYPE 4)
  - Normal mode
- **Adjustment position**
  - VR354(TG)

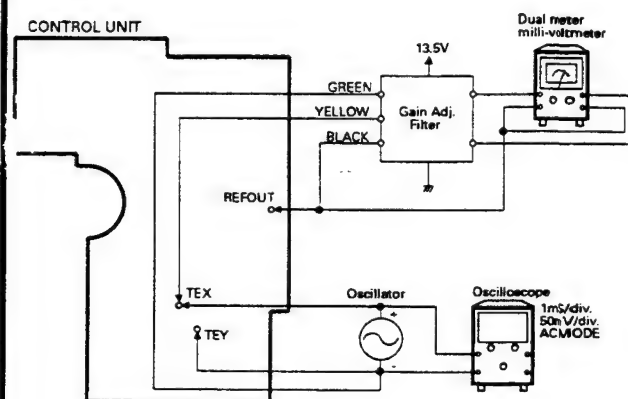

Fig. 43

### Adjustment Procedure

1. After checking that the power is OFF, connect the gain adjustment filter and measuring equipment as shown in the above diagram.
2. Play tune TNO 19 in normal mode.(TYPE 4:TNO 14)
3. Set the oscillator to 1.4kHz, and observe the TEX/TEY output in the oscilloscope. Adjust the oscillator output to obtain a TEX/TEY output of 300mVp-p.
4. Adjust VR354(TG) to obtain a milli-voltmeter difference of  $0 \pm 0.5\text{dB}$ .

## 10. TE Offset Adjustment-2

• **Purpose:**  
To adjust the electrical offset of the tracking servo to zero.

• **Maladjustment symptoms:**  
Search times too long, carriage run-away.

• **Measuring equipment / jigs** • DC voltmeter

• **Measuring point** • TEY

• **Test disc and setting** • No Disc  
• Test mode

• **Adjustment position** • VR353

### Adjustment Procedure

Same as for TE offset adjustment-1, but with the DC voltage of the TEY output adjusted to  $0 \pm 50 \text{ mV}$ .

The purpose of this additional adjustment is to correct any deviations generated when carrying out the tracing balance and tracking servo loop gain adjustments after completing TE offset adjustment-1.

## 11. Tracking Balance Adjustment-2

• **Purpose:**  
To adjust the tracking servo offset to zero.

• **Maladjustment symptoms:**  
Search times too long, poor playability, carriage run-away.

• **Measuring equipment / jigs** • Oscilloscope.

• **Measuring point** • TEY

• **Test disc and setting** • TCD-782 (or SONY TYPE 4)  
• Test mode

• **Adjustment position** • VR351

### Adjustment Procedure

Steps 1 thru 5 same as tracking balance adjustment-1.

6. Check that the level difference between the positive and negative amplitudes of the TEY signal is within 5% (See Fig. 36-38). If greater than 5%, adjust with VR351.

7. If further adjustment was necessary in step 6, repeat TE offset adjustment-2.

## 4.2 TUNER ADJUSTMENT

### ● Connection Diagram

#### NOTICE:

SELECT C1 so that total capacity of 80pF is attained from the direction of the receiver jack.

16,17	NC			Not used
18	BRST	I		Bus communication reset input pin
19	BSRQ	O	C	Bus communications service request output pin
20	BRXEN	I/O	C	Bus communication reception enable input pin
21	BSCK	I/O	C	Bus serial clock input/output
22	BSO	O	C	Serial data output pin
23	BSI	I		Bus serial data input
24	EJSW	I		Eject signal input
25	REMIN	I		Remote control pulse input
26	CNVSS			GND
27	RESET	I		Reset input
28	FECNT	O	C	FE output control pin
29	NC			Not used
30	XIN	I		Crystal oscillating element connection pin
31	XOUT	O	C	Crystal oscillating element connection pin
32	VSS			Gnd
33-40	NC			Not used
41	POWER	O	C	CD +5V control
42	CONT	O	C	Servo driver power supply control
43,44	NC			Not used
45	VDSENS	I		VD over voltage sense input
46	VDCONT	O	C	VD control input
47	DSET	O	C	Disc set indicator control output
48	BLGT	O	C	LCD back light control output
49	VMC	O	C	Loading motor driver power supply
50	EJ	O	C	Loading motor EJECT control
51	LOAD	O	C	Loading motor LOAD control
52	NC			Not used
53	DINC	I		Disc insert sense input
54	EJTD	I		Disc eject position sense input
55	CLAMP	I		Disc clamp sense input
56	NC			Not used
57	HOLD	O		Hold control output
58	TBC	O	C	Tracking bank switching output
59	NC			Not used
60	MIRR	I		Mirror detector input
61	LOCK	I		Spindle lock detector input
62	FOK	I		FOK signal input
63	HOME	I		Home position detector input
64-68	NC			Not used
69	OPTSW	I		Digital output ON/OFF input
70	CDMUTE	O	C	CD mute output
71	ADENA	O	C	A/D reference voltage output
72	TESTIN	I		Test program mode input

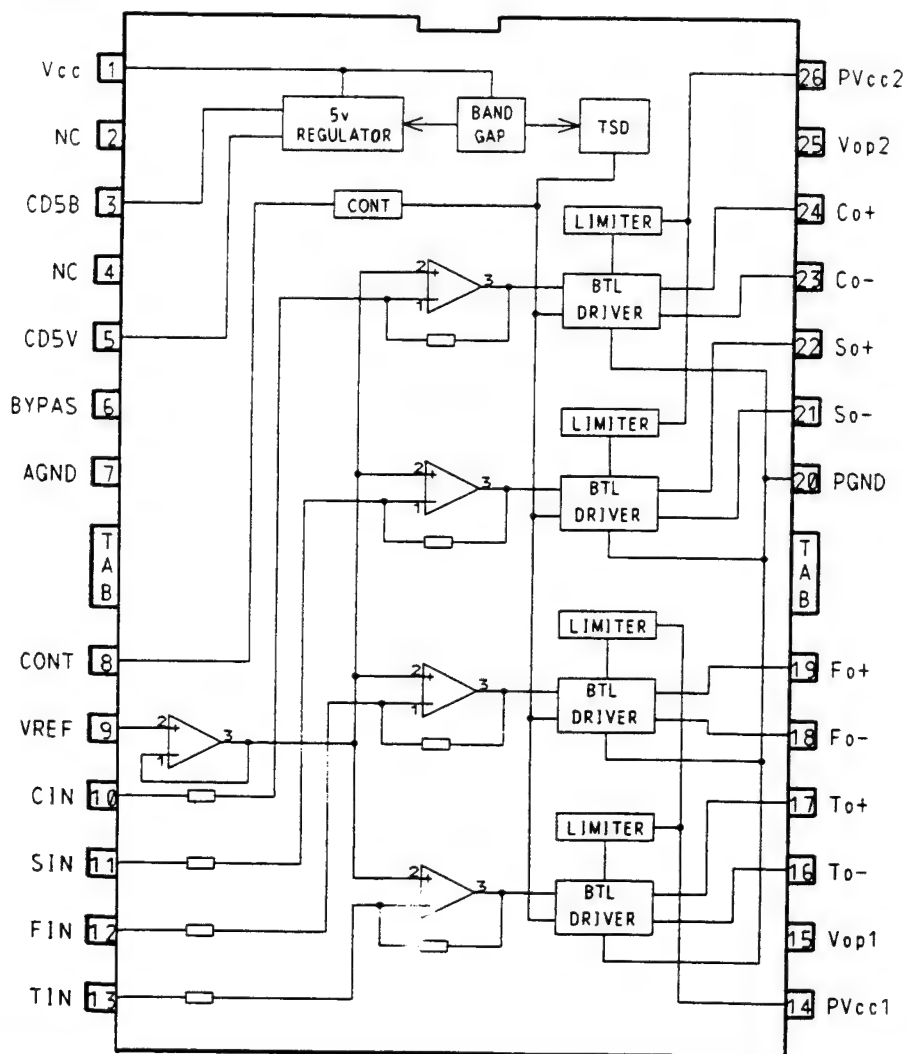

Pin No.	Pin Name	I/O	Output Format	Function and Operation
73	VCC			Back up 5V
74	VREF	I		A/D reference voltage input
75	AVSS			A/D GND
76	CSEL			Compression select
77,78	NC			Not used
79	KD0			Analog key input 0
80	KD1	I		Analog key input 1

Output Format	Meaning
C	CMOS output
NM	Middle resistivity N channel open drain

## ● Pin Functions (UPC1347GS)

Pin No.	Pin Name	I/O	Output Format	Function and Operation
1	VCC			
2	BP-	I		Vibration detect amplifier 1 inverter input
3	BPO	O		Vibration detect amplifier 1 output
4	WC+	I		Window comparator non-inverting input
5	WC-	I		Window comparator inverting input
6	GND			GND
7	QDH	I		Vibration detect amplifier 3 non-inverting input
8	QDO	O		Vibration detect amplifier 3 output
9	A	I		A signal input
10	C	I		C signal input
11	B	I		B signal input
12	D	I		D signal input
13	E	I		E signal input
14	F	I		F signal input
15	PIN	I		APC circuit PD amplifier input
16	LA	O		APC circuit LD amplifier output
17	LAON			Laser diode ON/OFF switching
18	VREF1			Reference voltage
19	GND2			GND
20	RF+	I		RF amplifier non-inverting input
21	RFS	O		RF summing virtual output
22	RF-	I		RF amplifier inverting input
23	NC			Not used
24	RFO	O		RF amplifier output
25	APC-	I		APC circuit PD amplifier inverting
26	TE2+	I		Tracking error amplifier 2 non-inverting input
27	APCO	O		APC circuit PD amplifier output
28	TE1O	O		Tracking error amplifier 1 output
29	TE2-	I		Tracking error amplifier 2 inverting input
30	TE2O	O		Tracking error amplifier 2 output
31	VREF2			Reference voltage
32	FE2+	I		Focus error amplifier 2 non-inverting input
33	FE1+	I		Focus error amplifier 1 non-inverting input
34	FE1O	O		Focus error amplifier 1 output
35	FE2-	I		Focus error amplifier 2 inverter input
36	FE2O	O		Focus error amplifier 2 output

## UPC1347GS

**●Pin Functions (UPD6375GC)**

Pin No.	Pin Name	I/O	Output Format	Function and Operation
1	NC			Not used
2	WDCK	O		Output terminal for signal having double the frequency of LRCK
3	C4LR	O		Output terminal for signal having four the frequency of LRCK
4	RFCK	O		Oscillation clock divider signal,output pin for signal giving 1-frame sync.
5	EFMI	I		EFM signal input terminal
6	TEST			Test terminal
7	VSS			Gnd
8	C1D1	O		Output terminal indicating C1 error correction status
9	C1D2	O		Output terminal indicating C1 error correction status
10	C2D1	O		Output terminal indicating C2 error correction status
11	C2D2	O		Output terminal indicating C2 error correction status
12,13	NC			Not used
14	STBY	I		Standby input terminal
15	NC			Not used
16	PLK1	O		VCO output terminal for use in analog PLL selection
17	VDD			5V
18	PLK8	I		VCO output terminal for use in analog PLL selection
19	PLCK	O		Bit clock monitor terminal
20	VSS			Gnd
21	POUT	O		Output terminal for phase comparison between EFM signal and bit clock
22	WFCK	O		Signal issuing one-frame period by bit clock dividing signal
23	VDD			5V
24	MDS	O		Signal indicating spindle motor CLV servo control output status
25	MDF	O		Spindle motor CLV servo control positive direction output terminal
26	MDR	O		Spindle motor CLV servo control negative direction output terminal
27	LOCK	O		"H" when synchronization signal & frame counter output coincide at EFM demodulator
28	RST	I		Reset signal input terminal
29	A0	O		Control signal distinguishing data from microcomputer
30	STB	I		Signal latching serial data inside LSI
31	SO			Serial data input terminal
32	SI	I		Input terminal for data from microcomputer
33	VSS			Gnd
34	SCK	I		Clock input terminal serial data input
35	TX	O		Digital audio interface data output terminal
36	MUTE/EMPH	O		Output for mute command decoding signal or sub-Q.commpand pre-emphasis data
37	SFSY	O		Signal indicating subcode one-frame synchronization
38	SBSY	O		Signal indicating head of subcode block
39	SBCK	I		Subcode data read clock input terminal
40	SBSO	O		Subcode data output terminal
41	VDD			5V
42	XTAL	O		Oscillation continuation terminal
43	XTAL	I		Oscillation continuation terminal
44	VSS			Gnd
45	C16M	O		Oscillation clock output terminal
46	VDD			5V
47	C4M	O		1/4 cycle output terminal for oscillation clock signals
48	FLAG	O		Flag sig. indicating that the current audio data output of incorrectable data
49	SCKO	O		Clock output terminal for audio serial data
50	DOUT	O		Serial audio data output terminal
51	LRCK	O		Signal distinguishing between left and right channel DOUT terminal output
52	NC			Not used

\*UPD6375GC

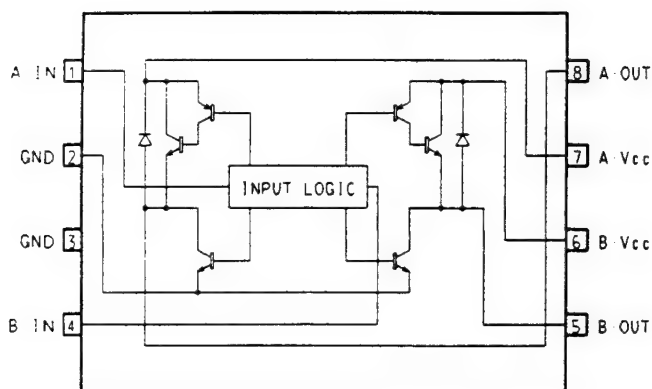

XRA4558F

IC's marked by \* are MOS type.

Be careful in handling them because they are very liable to be damaged by electrostatic induction.

MB3854PF

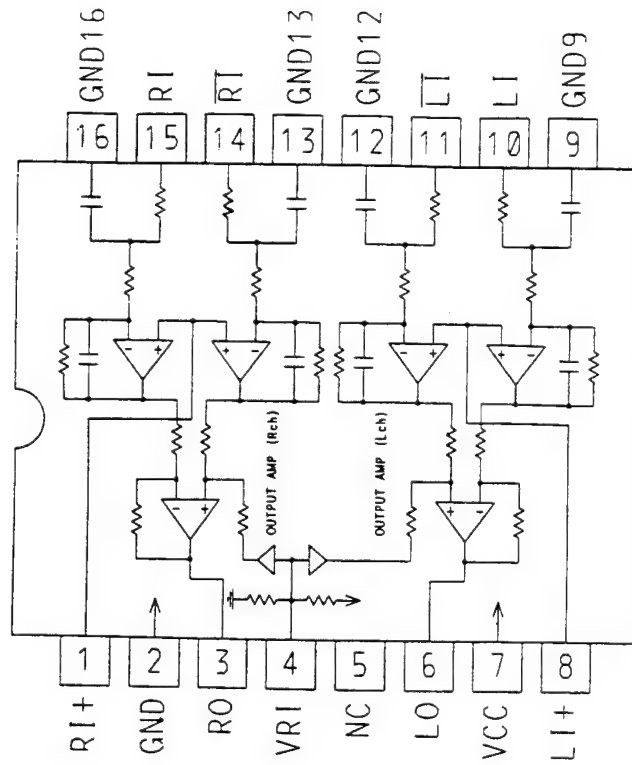

UPD6374AGH

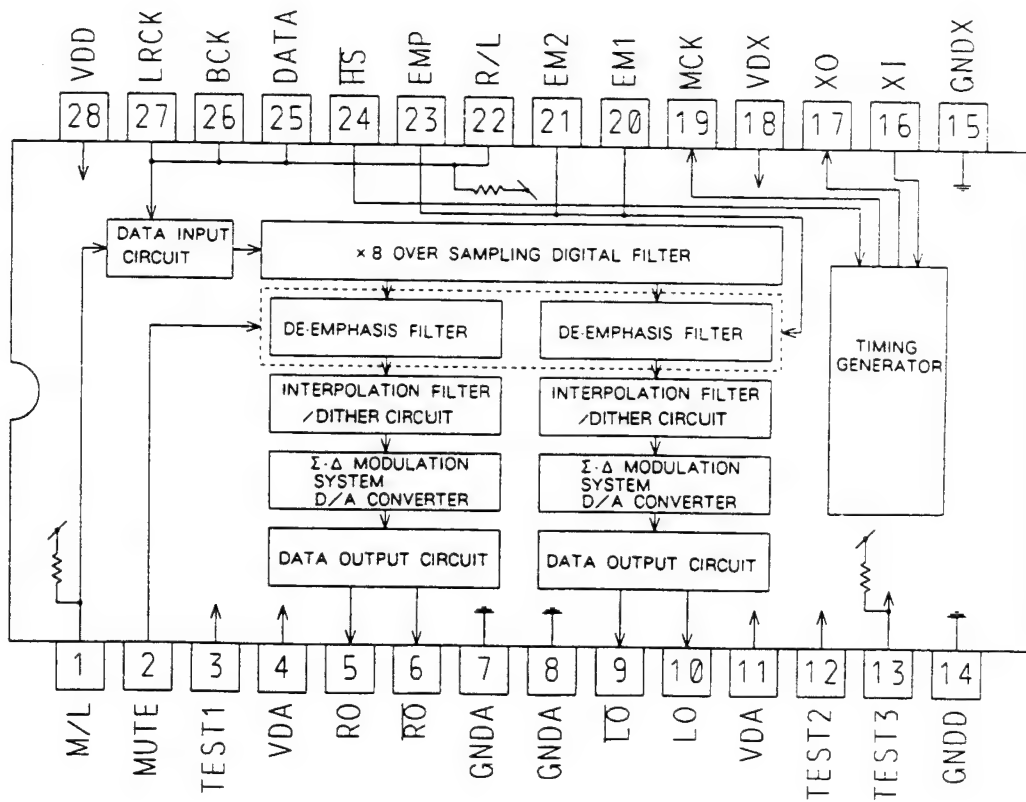

**●Pin Functions(UPD6374AGH)**

Pin No.	Pin Name	I/O	Output Format	Function and Operation
1	VDD			Power supply
2	OUTSEL	I		Sets PWM output mode for the motor system
3	SCK	I		Clock input terminal for serial data input and output
4	SI	I		Serial data input
5	SO	O		Serial data and status signal output
6	STB	I		Signal latching serial data inside LSI
7	A0	I		Used in combination with stb A0 = "L" : Set in address register when STB is active A0 = "H" : Parameter setting when STB is active
8	RST	I		System reset
9	DGND			Logic circuit GND terminal
10	LOCK	I		Input terminal for detection of spindle servo error signal
11	MDR	I		Input terminal for detection of spindle servo error signal
12	MDF	I		Input terminal for detection of spindle servo error signal
13	WFCK	I		Input terminal for detection of spindle servo error signal
14	RFCK	I		Input terminal for detection of spindle servo error signal
15	AVDD			Positive power supply terminal for analog circuit
16	EFM	O		EFM signal output terminal
17	ASI	I		Level comparing input for RF signal comparison
18	RFI	I		Analog input terminal for EFM comparator
19	REFO	O		A/D converter midpoint output terminal inside LSI
20	AGND			Analog circuit GND
21	RF	O		RF signal input terminal
22	FE	I		Focus error terminal
23	TE	I		Tracking error input terminal
24	VR	I		Input signal is quantified as follows:FS=88.2kHz,Resolution:6 bits The output takes place directly at microcomputer interface, that is, not via the filter block within LSI
25	AVDD			Positive power supply terminal for analog circuit
26	TECO	I		Tracking comparator input terminal
27	TECI	I		Tracking comparator input terminal
28	DVDD			Positive power supply terminal for logic circuit
29	FF	O		PWM positive output terminal for the focus loop filter
30	FR	O		PWM negative output terminal for the focus loop filter
31	TF	O		PWM positive output terminal for the tracking loop filter
32	TR	O		PWM negative output terminal for the tracking loop filter
33	DGND			Logic circuit GND terminal
34	SF	O		PWM positive output terminal for the thread loop filter
35	SR	O		PWM negative output terminal for the thread loop filter
36	MF	O		PWM positive output terminal for the spindle loop filter
37	MR	O		PWM negative output terminal for the spindle loop filter
38	DVDD			Positive power supply terminal for logic circuit
39	T7	I		Sets tracking PWM output mode
40	T6	I		Sets focus PWM output mode
41	T5	I		Selects motor modulation mode
42	T4	I		Selects between focus and tracking modulation mode
43	MIRR	O		MIRR detection signal output terminal
44	RFOK	O		RFOK detection signal terminal
45	HOLD	I		Hold control signal input terminal
46	TBC			Tracking bank switching terminal
47	CKIN	I		System clock input terminal
48	TEST	I		Test terminal

## 10.ELECTRICAL PARTS LIST

### NOTE:

- Parts whose parts numbers are omitted are subject to being not supplied.
- The part numbers shown below indicate chip components.

Chip Resistor

RS1/□S□□□J, RS1/□□S□□□J

Chip Capacitor (except for CQS.....)

CKS....., CCS....., CSZS.....

Tuner Amp Unit
Consists of
Tuner Amp P.C.Board
Tone Control P.C.Board

Unit Number :  
Unit Name : Tuner Amp Unit(DEH-670/EW)

## Miscellaneous Parts List

PU Unit CGY1020

- The DEH-670SDK/GR Parts List enumerates the parts which differ from those for the DEH-670/EW,X1B only. The parts other than those enumerated in the DEH-670SDK/GR Parts List are identical with those in the DEH-670/EW,X1B Parts List, to which you are requested to refer, accordingly. The DEH-670/EW,X1B Parts List is given on page 69.
